

Important Notice to Parents and Guardians: Synthetic Drug Dangers

Dear Parents and Guardians,

As part of our commitment to ensuring student safety, we want to raise awareness about the serious risks associated with synthetic drugs, including fentanyl. Fentanyl and other synthetic opioids can be extremely dangerous, even in small amounts, and may be found in counterfeit pills that appear similar to prescription medications.

What You Need to Know:

- **Risks of Synthetic Drugs:** Synthetic drugs, such as fentanyl, can lead to severe health consequences, including overdose and death, especially when taken without a prescription.
- **Counterfeit Pills:** Many synthetic drugs are found in pills that look like legitimate prescription medications, increasing the risk of accidental consumption.
- **Preventive Steps:** Please speak with your child about the dangers of synthetic drugs and the importance of only taking medication prescribed by a healthcare professional.

For more information on synthetic drug risks, please visit [CDC Fentanyl Facts](#).

Thank you for partnering with us to keep our school community safe.
